

# Symbolism Mind-Map (version: alpha 0.0.1)

Only some of the concepts and relations are shown and the labels are merely mnemonics. Different minds decode these words into different meanings, so if a label doesn't make sense to you consider it in context and find a label that suits you. Note that each green concept is related to the mirror-opposite blue concept in some way via symbolic representation. There is also a similar symmetry within the orange concepts.

- Semiotic Terms:**
- Object & Subject are the same,
  - Parole = Signal,
  - Langue = Information Space,
  - Representatum = Symbol,
  - Interpretant = Conception.
